

The attached file is a plugin that creates a jobs board where users can search and apply for jobs depending on job location, salary, and category. When a user fills the job application form, a post is created in the applications CPT.

You need to:

1. Suggest improvements/missing code in the file 'single-ams_jobs.php'.
 - a. Make it compliant with the PHP and WordPress coding standards.
2. Add reCAPTCHA to the job application form along with the server-side verification using AJAX.
 - a. Add fields in plugin settings where users can enter keys for the captcha.
3. Your code should be compliant with PHP and WordPress coding standards.
4. If possible, add your code to a GitHub repository and share the link so that we can review the code there.
